CONFINED SPACE RESCUE TRAINING

Dynamic cost effective and flexible training to meet your needs .

Confined Space Rescue Training program content is designed to incorporate many of the requirements of NFPA 1006 for Confined Space Rescue standards. Upon completion, students will gain the knowledge, skill and ability to preplan confined spaces for rescue, manage rescue operations, ability to control hazards, learn advanced skill in confined space rescue communications, inspecting and maintaining equipment, and coordinating with other emergency responders and participate in various scenarios for team building skills.

Workforce Safety Training programs are built on a solid footing of experience. As veteran first responders, with a *cumulative work experience of 172 years* we've been on the front line of emergency response. Harnessing our collective knowledge as professional responders, we pass on real-life experiences and information that creates a learning environment

that stimulates student participation in all aspects of the class room and hands on training.

We know what works and what doesn't — because we've been there. You won't find that in-depth knowledge in a training video or an online training course.
